Park Factors and WAR: Why they Matter

An Analysis by Thomas Zinzarella

What is WAR?

- Our research class decided to look into WAR. In baseball, WAR stands for Win's Above Replacement. WAR is one of the many statistical tool's baseball professionals use to judge a player.
- WAR aims to find how many more win's a player can bring to a team than a Minor League baseball player or a free agent.
- In retrospect, 4-5 WAR, you are at an All-Star level and anything over 6 in a season is considered potential MVP recognition.

The Cape Cod Baseball League: An Overview

- One of the premier baseball summer leagues in the U.S (1 in 7 MLB ballplayers played on Cape.)
- Drastic differences in ballpark sizes
 - In Orleans: CF fence is 432, compared to 352 in YD. YD is a much smaller ballpark.

Why the Cape League?

- Provides many constant variables for our class project. In order to play in the league, you must have college eligibility. Generally, players are between rising sophomores-rising seniors.
- Most players are rising sophomores or juniors because they want to enter draft after their junior year.
- Since these are the best college baseball players, the talent level is close together.
- In June, each team has temporary players to fill roster spots for players who are still competing
 in the College World Series or are heading to play for the Collegiate National Team.
- Some temporary guys earn full season contracts, but these are considered the "replacement players."

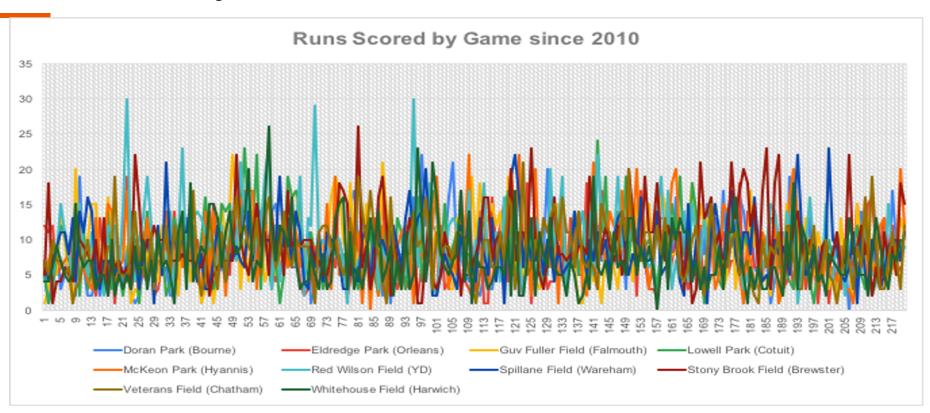

How we Gathered our Data

- Pointstreaks box score data from 2010-2019
- Gathered total runs scored in home games and away games

Summary Statistics

Our Formula and Results

$$PF = 100*(rac{rac{homeRS+homeRA}{homeG}}{rac{roadRS+roadRA}{roadG}})$$

Bourne	Orleans	Falmouth	Cotuit	Hyannis	YD	Wareham	Brewster	Chatham	Harwich
0.901	0.940	1.048	1.004	1.029	1.122	1.003	1.152	0.989	0.852
	-								

What this Means for a Players' WAR

- HR in Brewster/YD shouldn't be weighed the same as a HR in Orleans.
- Pitchers should be let off at easier ballparks, compared to other ones.

Application to the 2018/19 Season

• Case Study: Whitehouse Field (Harwich Mariners)

o LF: 330 CF: 395 RF: 330

• 2019: 7th in CCBL HR

- O Niko Kavadas 9 HR, Lanzilli 4 HR
- o 27 as team (15 road, 12 home)
- o 2nd ERA Cape
- 2018: Last HR (14)
 - o Home: .223 AVG, 3.06 team ERA
 - o Road: .262 AVG, 4.79 team ERA
- 2017: Last HR (14)
 - o Home: .213 AVG, team 3.72 ERA
 - o Road: .260 AVG, team 5.78 ERA
 - O Jonathan India, 5th overall pick by Reds, 21 HR at Florida

Other Factors

- Double-headers brought back few years ago
 - Teams play 2 double-headers in June (one at home and on road, 7 inning games.)
- Wood-bats
 - College players play with aluminum bats. Takes a few weeks in June to adjust.
 Cape coaches always say, take your batting average at school and cut it in half.
- Rain-outs
 - This past summer, because of so many rain outs in June, some teams had to play 32 games in 29 days.
- Pitching (ERA qualifier)
 - Many college coaches give summer coaches an inning's limit on a pitcher.
 So from 10-years ago, pitchers stayed longer.
- Pitching adjustment
 - Every pitcher and player in this league are the studs of their team. Many of these pitchers are Friday night starters, which are typically a team's ace pitcher.

Conclusions/Questions

- WAR effects both pitcher and hitters
- Different ballparks offer different opportunities

Thank you
